Lead Backend Rails Software Engineer (Dublin, Remote)

Development - Dublin 2 (Hybrid)

Lead Backend Rails Software Engineer (Dublin, Remote)

Job Requisition Profile

Must have Ruby on Rails Experience

We are seeking an innovative and forward-thinking **Lead Backend Rails Software Engineer** passionate about building a world-class platform through a world-class team. Creating technical software excellence and spearheading application development in design, implementation, and maintenance to make magic happen.

At GTreasury, you'll be a part of makers, breakers, doers, and disruptors, who love to solve real problems and meet real customer needs. As an established FinTech leader in the SaaS treasury management space, our vision is to create the next-generation of technology tools for the global, corporate financial office.

About the Team:

Our vision at GTreasury is to enable customers with the clarity to act, and the Forecasting team aims to achieve just that!

Using GenAI, ML, and other sophisticated modeling algorithms, the Forecasting feature helps folks in the Finance office forecast their cash flow into the future, and if reality deviates from that, not only detect that early, but understand why, and what corrective actions you can take.

What You'll Do:

- Partner with architects and product managers to design, estimate, and implement cutting-edge application features across front-end, server-side, and database tiers
- Utilize AWS services to craft powerful, scalable, and resilient cloud-based solutions (Lambdas/Elastic Beanstalk/RDB)
- Enhance our software applications and work with delivery pipelines, feature flags, ensuring seamless integration and deployment
- Conduct rigorous unit, integration, and non-functional (performance, security) testing to guarantee our software is production-ready
- Leverage observability tools and logging to troubleshoot and resolve issues across development, test, and production environments
- Share your enthusiasm for tech trends, explore and learn new technologies, engage with tech communities, mentor fellow engineers, and lead in technical design and code evaluations
- Always seek ways to enhance team operations, processes, methodologies, and technology choices, striving for excellence in every practice
- Ensure all work aligns with quality, operational, and architectural standards, contributing to the overarching success of our organization
- Facilitate the configuration of no/low-code bank connectors with top-tier financial institutions

Who You Are:

- Strong past experience with Ruby on rails
- A leader within your team, and influencer across teams
- Expert coder
- You can solve problems in high pressure situations
- You can work as part of an international team
- You thrive on creating innovative solutions
- You love tackling challenges with creative ideas
- You write stellar code that wows and performs

Essential Knowledge / Experience:

- **Deep knowledge and expertise in ruby on rails required**
- Bachelor's degree in Computer Science or equivalent experience, with **at least 10 years** of application development experience
- An **expert** in application development and best practices for cloud architecture and deployment
- **Proven ability** to influence and mentor developers within an agile team environment
- **Skilled** in reviewing and estimating user stories as part of an agile development process
- **Extensive experience** with AWS Services
-
- **Expert** in database development
- Experience in building web applications using React, and familiarity with JavaScript frameworks
- Experience with Test-Driven Development (TDD) and Behavior-Driven Development (BDD)
- Skilled in designing and implementing CI/CD pipelines
- **Advanced** troubleshooting skills and experience in production application support
- Solid understanding of Linux/Unix operating system
- Knowledge of AI technology
- Experience in the financial industry is also a plus

Abilities Required:

- **Leadership:** Mentoring and growing others
- A collaborator and influencer across teams and colleagues
- A champion and agent of change to drive continuous improvement
- Highly adept at identifying & seizing opportunities to advance the technology and product, leveraging vision and insight.
- Highly analytical and data driven
- Leverage your **advanced** analytical and problem-solving skills to navigate the intricacies of a sophisticated application and industry. Excel in both verbal and written communication, and effectively collaborate with teammates and stakeholders, both technical and non-technical
- **Exude** a commitment to quality and a keen understanding of customer needs, ensuring that every solution meets the highest standards
- Be a **self-starter** who can prioritize tasks and accomplish assignments independently, driving projects forward with minimal supervision
- Demonstrate a **quick learning** capacity, staying updated with best practices and current technologies in relevant areas, and applying this knowledge proactively
- Utilize your **solid analysis** and troubleshooting skills to identify and resolve issues efficiently, ensuring smooth and reliable software performance
- Communicate effectively and thrive as part of a cross-functional, global agile delivery team, contributing to collective success
- Bring **deep software engineering experience** in complex distributed systems, ensuring robust and scalable solutions

About GTreasury:

GTreasury believes there is opportunity in complexity. We connect treasury and finance teams with industry-leading experts, technology solutions and untapped possibility. By simplifying complexity, teams can unleash their organization's potential to gain strategic advantages and grow. GTreasury helps organizations reach that potential by connecting treasury and digital finance operations through a world-class SaaS treasury and risk management platform and integrated ecosystem where cash, debt, investments, and exposures are seamlessly managed within the office of the CFO. GTreasury delivers intelligent insights, while connecting financial value chains and extending workflows to third-party systems, exchanges, portals, and services. Headquartered in Chicago, with locations serving EMEA (London) and APAC (Sydney and Manila), GTreasury's global community includes more than 800 customers and 30+ industries reaching 160+ countries worldwide.

At GTreasury, we know that our people are what makes GTreasury great and we celebrate the unique perspectives and experiences that our diverse teams bring to the table. GTreasury does not discriminate against employees or prospective candidates based on race, color, religion, sex, national origin, gender identity or expression, age, disability, pregnancy (including childbirth, breastfeeding, or related medical condition), genetic information, protected military or veteran status, sexual orientation, or any other characteristic protected by applicable federal, state or local laws and we strongly encourage people from underrepresented groups to apply!
